Summary Variables

KBEG Summary Variables for Sibling CAPI Instrument

OVERVIEW

This module contains information about the selected sibling participant rather than survey responses from the selected sibling participant. Details such as the graduate's age at time of interview and place of residence at time of interview are included in this module. Other details about the selected sibling participant that remain static across time - for example, gender, date of birth, and random replicate number - are not reproduced in this module. Such variables can be found in the first module of WLS documentation:

Status and Descriptive Variables.
