In Person: Internet

OVERVIEW

The Internet module includes items regarding the use of personal computers and the Internet by the respondent and members of the respondent's household. Information about current or past household computer ownership and current or past household Internet access is included in this module. Main topics of interest for respondents who have access to the Internet from home include how long ago his or her household first got Internet access, how much time he or she spends using the Internet from home, and whether or not the respondent's spouse connects to the Internet from home. To gain a better understanding of why some respondents do not have a personal computer or access to the Internet from home, some items within the module ask the main reason why the respondent's household does not have these things.

Previous waves of the Wisconsin Longitudinal Study did not include an Internet module. Although computer networks similar to the Internet existed much earlier, the public version of the Internet became available in the 1990's. At the time of the 1993 WLS study, very few households had Internet access, and an Internet module would have been impractical at that time. As the Internet continues to become a more popular tool for communication, entertainment, financial management, and learning, understanding our respondents' computer and Internet use trends can provide important insights about computer and Internet use among the aging population.

In addition to obtaining information about computer and Internet use, the Internet module will also be used as an experiment to test different wordings of the same questions. Five questions in this module have alternate wordings and response choice orders.

Note: For many cases a participant's spouse or other family member was present during the interview. This sometimes resulted in the participant relying on the other person for help in answering some or many of the questions. At the end of each module the interviewer indicated the amount of help the participant received and who provided that help. That assessment is covered by codes 1 through 5. Additionally, a code of 7 indicates that the entire interview was administered to a proxy while a code of 6 indicates that this particular module was answered by a proxy but other modules were answered by the participant.

knetrel: Relationship of Internet Module helper or proxy to Participant.

Although most participants relied on only one helper or proxy for the interview, some had more than one. Thus the value of the relationship code may vary across the modules.
