

Proxy Interviews

A proxy interview was attempted when a main respondent was deceased or too ill to be interviewed at time 3, unless they had an NSFH1 spouse/partner. If there was to be an interview with a spouse/partner, this interview would cover the proxy questions about the main respondents' death or illness as part of a more extensive series on this topic. There were two exceptions. Proxy interviews were sought if the NSFH1 spouse/partner was deceased or too ill to be interviewed, or if the couple was not together at time 2. A proxy was needed in the latter case because the NSFH3 spouse interview asked about experiences since wave 2, and hence any questions on spousal death or illness would not be about the main respondent. Proxy interviews for main respondents were **not** sought in the event that a surviving spouse/partner refused the wave 3 interview or could otherwise not be interviewed. Proxy interviews were only required for main respondents; no proxy was sought for deceased or too ill spouse/partners or focal children.

ZY5 specifies whether the proxy interview was occasioned by death or illness. Variables ZY701 thru ZY27 are about Main Respondents who have died, the remainder are about those who were too ill to interview.

The questions asked are represented in italics, and the variable name and label, appear before the frequency distribution on each variable. The frequencies and codes below are followed by descriptive statistics for the variables identified by their variable names.

Cases are identified by three variables, CASEID, CASE, and TYPE. CASEID is a string variable and CASE is numeric. Since proxy interviews were conducted only respect to the main respondent, all are type R.

For example:

CASEID case type

00003R 3 R

00011R 11 R
