SHH Household Module

OVERVIEW

Information about the Sibling Respondent's household was collected in the following manner:

- Information regarding the respondent, spouse, children, and parents was gathered in separate modules. Information regarding other household members was gathered in the household module.
- The respondent was asked if anybody lives in their household other than individuals discussed previously in the interview.
- For each additional household member, the respondent was asked for the individual's relationship to the respondent, name, sex, age, and length of time living together.
- After information was collected on each additional household member, the respondent was asked if anybody other than the respondent, spouse and children in the household had a physical or mental condition, illness, or disability. If so, details of this condition were gathered.

BRIEF VARIABLE DESCRIPTIONS

The roster allows for up to nine household members. The last two digits of the variable indicate the table number. For example, CE00501 tells the age of the first household member; CE00502 tells us the age of the second household member.
