HRECALL - Cognition Recall Module Graduate-Spouse Phone Instrument

For more information on the Cognition Recall Module see Appendix G.

OVERVIEW

The 2004 - 2006 round of data collection is the first time that the spouses of the graduates have completed the word recall cognitive task. The purpose of this task is to help provide a measure for the cognitive ability of the respondent. The task consists of two parts. For the first part, the interviewer reads the following instructions to the respondent:

"Part of this study is concerned with people's memory. I'll read a set of 10 words and ask you to recall as many as you can. Please listen carefully as I read the set of words. I'm not allowed to repeat any of the words, so it's important that you can hear me very well. When I finish, I will ask you to recall aloud as many of the words as you can, in any order. Is this clear? Ok. The list is..."

The interviewer then reads one of two lists of ten words, which appear one at a time on the interviewer's computer screen. Once the interviewer finishes, the respondent repeats back as many words as he or she can remember and the interviewer records the repeated words.

The second task occurs eight minutes later on average. For the second task, the respondent is told:

"A little while ago, I read you a list of words and you repeated the ones you could remember. Please tell me any of the words that you remember now."

The respondent then recalls as many words as he or she can remember from the original list. The purpose of these two tasks is to test the respondent's memory immediately after hearing something and then a short time later for comparison.
