

## Phone: Children's Roster

This module includes all respondents of the telephone survey plus the 661 "mail only" respondents. See the XBEG module for complete details about these "mail only" respondents.

sd001kd                      Total number of children reported in 1993-1994 interview.

Table entries, one of each for up to 18 children. Last two digits indicate the table number. Only the prefix is specified below.

sd003	Sex of child.
sd004	Relationship of child to respondent.
sd005	Mortality status of child.
sd006	Month of child's death. (only available for phone respondents)
sd007	Year of child's death. (only available for phone respondents)
sd008	Living arrangement of child.
sd010	Highest grade of child's education. (only available for "mail only" respondents)
sd014	Century month of child's birth.

A similar table is available in the WLS Wave 2 data for children of 1992-1993 primary respondents. Variable names for the table in this wave match those in Wave 2 (except the first letter is S in this wave and R in Wave 2). Less information was collected for this wave of data. Thus some names from the numerical sequence are omitted in this table.

The respondent was asked to list his/her children from oldest to youngest. If the respondent listed any children out-of-order, they were reordered for this table. Don't knows and refusals for birth year are at the end of the table. If only month is missing, it is imputed as 6. Consecutive missing values remain in the reported order.

Information not collected is coded refused/ not ascertained. Some respondents reported the total number of children, but refused to give any details about these children. For those cases, all table entries for that total number of children are coded refused/ not ascertained and the remaining table entries are coded inappropriate. Some respondents refused to reveal any information regarding children (including number of children). These cases are coded refused/not ascertained for all variables in this module.

If the telephone respondent had any children who were alive, were biological or adopted, and were 18 years or older; then one of these eligible children was randomly chosen as the "selected" child. No selected child was chosen for respondents of the mail only survey. Variables for this selected child are:

sd003sk	Sex of selected child.
sd004sk	Relationship of selected child to respondent.
sd008sk	Living arrangement of selected child.
sd014sk	Century month of selected child's birth.
sd016sk	Selected child's birth order.

Additional information obtained about the selected child is in the XSKID module (variables sj001sk - sj006sk).

Variable names from the mail only survey are preceded by an "&" in the parenthesized list of variable names included with the variable description.

NOTE: See APPENDIX D for Creation of Rosters.

NOTE: See APPENDIX O - COR607, Century Months.

Note: All "mail only" respondents are coded -3 for SD006 since this information is not obtained on the mail survey. Thus the number of children coded alive for SD005 is greater than the number of children who have a code of 95 for SD006; and the number of inappropriate codes for SD005 is greater than the number of inap codes for SD006. Variable xstat93m is coded 2 for "mail only" respondents.
