Phone: Marriage

The variables for complete marital histories are primarily constructed using variables from both 1977 and 1994 data. Please read the sources of variables carefully!

If you want to use variables for number of children from current (1994) marriage, these variables were created in one of two ways.

> If the respondents remained in their 1977 marriage and they were 1977 respondents, we used the new information obtained in 1994 to update the previous children's roster obtained in the 1977 survey, by adding the number of biological and adopted children who were born between the marriage start and end dates.

> For all other 1994 respondents who answered the phone interview (i.e., 1977 non-respondents and those not currently in the same marriage at that reported in 1977), the data on number of children was obtained solely in the 1994 survey. PLEASE NOTE that often the answer to the question "How many biological or adopted children did you have in this marriage?" does NOT match the numbers and birthdays of children collected in the child roster.

> For 1977 non-respondents who answered the MAIL SURVEY only, the number of children could only be ascertained for the current/last marriage. This was done by selecting the biological and adopted children who were born between the marriage start and end dates.

sc001re-sc004ree: All 1994 respondents (N=5365)

sc005ref-sc040rec: All respondents currently married in 1994. (N=4263)

sc041rec-sc048rec: Complete history – First marriage
sc049red-sc054red: Complete history – Second marriage
sc055red-sc060red: Complete history – Third marriage
sc061red-sc066ref: Complete history – Fourth marriage

sc041red-sc066ref: Complete marital history through the 1994 follow-up survey
                   using data from 1977 and 1994 sources.

sc067ree-rc072reg: Most recent marriage as of 1994.

Please read related appendices.

NOTE: This module includes the 661 siblings who responded to the mail only
        questionnaire; in addition to the respondents of the 1993-94 sibling
        phone survey. Variable names from the mail only survey are
        proceeded by an "&" in the parenthesized list of variable
        names included with the variable description.

NOTE: See APPENDIX C for Marriage Coding.

NOTE: See APPENDIX O – COR607, Century Months.

Note: A 1977 sibling respondent who was never married at the time of the 1977 interview, but then married for the first time after 1977 and before the 1993/94 interview, was not asked about characteristics of the first spouse, unless the sibling respondent was married only once since 1977 and was still in that marriage at the time of the 1993/94 interview.
Sibling respondents who answered only the mail questionnaire were not asked for the birthdate of any spouses; thus, the age of the first spouse is coded as Not Ascertained. Wherever possible, information from the 1993/94 survey was used to calculate the age of the sibling respondent's spouse before marriage (that is, if there is a discrepency between the birthdate of the first spouse, and XAGEFSP, then the birthdate was used to calculate this value.) Conversely, if there was nonresponse on the birthdate question, then XAGEFSP was used to calculate the birthdate, if possible.

Note: For 1977 respondents who married for the first time before 1977, this variable refers to the education of the spouse at the time the spouse married the sibling respondent, unless the sibling respondent was married only once and was currently married at the time of the 1977 interview. In this case, this variable reflects the educational attainment of the spouse in 1977. For 1977 non-respondents, this variable refers to the first spouse's educational attainment at the time of marriage.
Sibling respondents who answered only the mail questionnaire provided the educational attainment of their first spouse at the time of marriage only if the sibling respondent had been married only one time.

Note: In cases where the respondent indicated a current marital status of divorced, but the last marriage ending in separation, we assume that the marriage ended in divorce.
In cases where the respondent was never married in 1977 and indicated that s/he was currently married, but did not get married after 1977, we assumed one marriage occured (with begin date of marriage unknown).
There is 1 case where the status is separation but the respondent has since married. Since we do not know how the marriage ultimately ended we keep the separation data, as the respondent was separated in 1977.

Note: Male sibling respondents were not asked about the number of children from the first marriage in 1977. If these respondents were married more than once before their 1977 interview, we calculated the number of children in their first marriage either by: (1) subtracting the numbers of children from later marriages from the total number or children, or (2) using information about the birthdates of children obtained in 1993/94 to obtain the number of children born during the first marriage.

The number of adopted children was not ascertained for men in the 1977 interview, while it was ascertained in the 1993 interview. This variable includes BOTH biological and adopted children, while the 1977 variable (XFMNOCH) does not include adopted children. Thus, SC048REE is often greater than XFMNOCH, even when the respondent had no more children after 1977.

Note: The number of adopted children was not ascertained for men in the 1977 interview, while it was ascertained in the 1993 interview. This variable includes BOTH biological and adopted children, while the 1977 variable (XTMNOCH) does not include adopted children. Thus, SC060REF is often greater than XTMNOCH, even when the respondent had no more children after 1977.
