

ECONOMICS 205B
Macroeconomic Theory II

This course is the second in a three quarter sequence of macroeconomic theory for students in the Ph.D. program. The objective of this course is to provide empirical assessments of various macroeconomic theories, and also to contrast the recent work in New Keynesian theory with the literature in the New Classical vein, by examining various sectors of the economy. The evaluation of your performance will be based on four problem sets (20%), one midterm (30%) and one final (50%). Three books are required:

David Romer, *Advanced Macroeconomics* (McGraw-Hill, New York, 1996) (hereafter **AM**).

N. Gregory Mankiw and David Romer, *New Keynesian Economics* (MIT Press, Cambridge, MA, 1991) (hereafter denoted as **MR1** and **MR2**, respectively).

All required readings not in the books are in the reader, also required. A background text that you may wish to refer to is:

Olivier J. Blanchard and Stanley Fischer, *Lectures in Macroeconomics* (MIT Press: Cambridge, MA 1989) (hereafter denoted as **LM**).

Textbooks that may be useful for more elementary review include:

Robert Hall and John Taylor, *Macroeconomics*, 5th ed. (McGraw-Hill: New York, 1997).

Required readings are denoted by an asterisk (*), recommended readings by an (r).

1. INTRODUCTION AND STATISTICAL BACKGROUND

* Alpha C. Chiang, *Fundamental Methods of Mathematical Economics* 3rd edition (McGraw-Hill: NY, 1984), pp. 549-561, 576-591.

* Andrew C. Harvey, *Time Series Models* (MIT Press: Cambridge, MA, 1984), pp. 9-29.

2. RATIONAL EXPECTATIONS WITHOUT AND WITH NOMINAL RIGIDITIES

* Robert Lucas and Thomas Sargent, 1979, "After Keynesian Macroeconomics," FRB Boston *After the Phillips Curve: Persistence of High Inflation and High Unemployment*, Conference Series No. 19.

* **AM**, Sections 6.0-6.8.
