

Phone: Non-Normative Screener

The nonnormative screener was a part of the kids' roster that sought to identify children with various developmental disabilities and long-term, serious mental illness. These analysis variables are the final result of using the screener, call-backs, and other parts of the WLS to identify the condition that child has. For details on the identification of nonnormative children, see

COR 1018a.

The original variables in this module have been archived and replaced by a set of new and improved measures. The updated version were based on a comprehensive review of individual cases. The updates include (1) changes in the nonnormative status of some children reported in the child roster, or (2) changes in the specific conditions of some children. As a result, the numbers of nonnormative children each respondent had at the time of interview have been changed for some cases as well. For details on changes in the updated version, see

COR 1018b.

The updated version:

Summary variables:

GD360: Number of children with a developmental disability

GD361: Number of children with a mental illness

GD362: Number of children with severe depression

Rostered variables:

GD36301-GD36317: Does child have a developmental disability or mental illness?

The archived variables: GD300, GD301, GD302, GD30301-GD30317

gd360: Number of children the Graduate Respondent has with a developmental disability.

Data source: Graduate Respondent Collected in: 2004 Mode: phone

Source variables: GD36301-GD36317, h_dscr, h_d2 to h_d12, z23a, z23b, z23c, z23d, z23e, z23f, z23g

Revisions: Replacement 7/2012 Archived variable: GD300

NOT AVAILABLE ON PUBLIC RELEASE

Value	Label	Frequencies		
		Male	Female	Total

1		72	76	148
2		4	3	7
3		1	0	1
6		0	1	1

Note: This variable is based on a detailed screener that was used to identify children with a developmental disability. The conditions that are included as a developmental disability are: mental retardation, down syndrome, cerebral palsy, autism, brain injury, fragile X, fetal alcohol syndrome, and several other very rare conditions.

This variable is a final analysis variable based on an extremely detailed screener asking about various conditions as well as call-backs and analysis of other variables.

This variable is a replacement for the archived variable GD300. See COR 1018b in Appendix D for details.

gd361: Number of children the Graduate Respondent has with a mental illness.

Data source: Graduate Respondent Collected in: 2004 Mode: phone

Source variables: GD36301-GD36317, h_dscr, h_d2 to h_d12, z23a, z23b, z23c, z23d, z23e, z23f, z23g

0		3099	3580	6679
1		17	39	56
2		0	5	5

Note: This variable is based on a detailed screener that was used to identify children with a long-term, severe depression. Long-term, severe depression is used to refer to children that were either hospitalized for depression or suffered from an impairment of daily functions as a result of their depression. In this updated version, postpartum depression IS included. There is only one postpartum depression case and it was not included in depression group in the old/archived version (GD302). However, in this updated version, we decided to include the case in depression group because postpartum depression is limiting daily functions.

This variable is a final analysis variable based on an extremely detailed screener asking about various conditions as well as call-backs and analysis of other variables.

This variable is a replacement for the archived variable GD302. See COR 1018b in Appendix D for details.

gd36301: Does the first child have a developmental disability or a long-term, serious mental illness?

Data source: Graduate Respondent Collected in: 2004 Mode: phone

Source variables: Du116c, Du116d, Du116f1, Du116f2, h_dscr, h_d2 to h_d12, z23a, z23b, z23c, z23d, z23e, z23f, z23g, GD01401

-2	Inappropriate Inappropriate (R has no 15th child or children roster not available)	3373	3900	7273
0	No	0	1	1

Note: This variable indicates whether this child has a developmental disability (DD), a severe mental illness (MI), or severe depression. The conditions included in the construction of this variable are: mental retardation, down syndrome, cerebral palsy, autism, brain injury, fragile X, fetal alcohol syndrome, several other very rare developmental disabilities, bipolar, schizophrenia, psychotic episodes, and severe depression (characterized by hospitalization or impairment in daily functioning as a result of the depression).

This variable is a final analysis variable based on an extremely detailed screener asking about various conditions as well as call-backs and analysis of other variables.

This variable is a replacement for the archived variable GD30315. See COR 1018b in Appendix D for details.

gd36316: Does the sixteenth child have a developmental disability or a long-term, serious mental illness?

Data source: Graduate Respondent Collected in: 2004 Mode: phone
 Source variables: Du116c, Du116d, Du116f1, Du116f2, h_dscr, h_d2 to h_d12, z23a, z23b, z23c, z23d, z23e, z23f, z23g, GD01416
 Revisions: Replacement 7/2012 Archived variable: GD30316
 NOT AVAILABLE ON PUBLIC RELEASE
