

Phone: Children's Roster

The complete children's roster was collected in the following ways:

- In the first roster, the 1975 respondents were asked to either confirm or correct the information we had about their children from the 1975 survey.
- In the second roster, the 1975 respondents were asked about children acquired since 1975. This second roster also obtained information about all children of 1975 nonrespondents.

Information from both of these rosters was combined into one new table to create the complete children's roster and ordered by century month of birth, from oldest to youngest. See Appendix D COR520 - Creation of Complete Children's Roster.

Don't knows and refusals for birth year are at the end of the table. If only month is missing, it is imputed as 6. Consecutive missing values remain in the reported order.

rd001kd Total number of children reported in 1992-1993 interview.

Table entries, one of each for up to 14 children. Last two digits indicate the table number. Only the prefix is specified below.

rd003	Sex of child.
rd004	Relationship of child to respondent.
rd005	Mortality status of child.
rd006	Month of child's death.
rd007	Year of child's death.
rd008	Living arrangement of child.
rd009	Marital status of child.
rd010	Highest grade or year of regular school that child ever attended.
rd011	Did child complete this grade or year of school?
rd012	Did child attend a regular school in the last 12 months?
rd013	If attended regular school, does child live with respondent while attending school or while not attending school.
rd014	Century month of child's birth.
rd015	Child originally reported in 1975 interview?

During the 1975 interview one of the respondents children was randomly chosen as the "selected" child. We intended to ask about this same child if he/she were still alive during the 1992-1993 interview. However, due to an error in the first version of the survey instrument, the "selected" child was randomly chosen for groups 0 and 1 (GROUP91=0 or 1) for the nonsib sample (XSTAT77=99). Of course this randomly chosen child was sometimes the same child as the 1975 selected child and sometimes he/she was different. Variable RDB02SK indicates if a new child was selected and the reason for the new selection.

In 2004, the master data file was restructured so that data for all selected children who were newly chosen for any reason other than noninterview of R in a previous survey are no longer available in the master data set. These variables are available in a separate file - newchild92, which is available upon request. 678 cases are in newchild92. Variable RDB02SK

is coded 4 (new child chosen due to death of 1975 selected child), 5 (new child due to error in instrument) or 7 (2 cases, random error) for cases whose data for the newly selected 1993 child is only available in newchild92. Variables RD003SK - RD016SK of KROS and all the variables in SKID (RJ001SK - RJ051SK) have been moved to newchild92 for children newly selected in 92. Data in the master file for these variables is coded not ascertained for the 678 cases.

The selected child has one variable for each of the preceding with SK as the suffix, plus the two additional variables:

rd002sk Is the selected child the same as in 1975?
rd016sk Selected child's birth order.

Additional information obtained about the selected child is in questions rj001sk through rj051sk.

Seven respondents refused to reveal any information regarding children. Thus we do not know whether or not they have any children. These cases are coded -3 as refused for all questions in this section.

NOTE: See APPENDIX D for Creation of Rosters.

NOTE: See APPENDIX O - COR607, Century Months.

rd001kd: Total number of respondent's children. Include biological, adopted, step or foster children as well as other children respondent considered to be a part of his/her family.
