

DiTella and Schargrodsy, American Economic Review (2004)

“Do Police Reduce Crime? Estimates Using the Allocation of Police Forces After a Terrorist Attack”

The original replication file is taken from the AER website. This is a slightly reorganized version of the posted data set.

There are 7884 observations and 10 variables.

The sample contains city blocks, observed monthly from April 1994 through December 1994.

The July data only contain thefts for July 1-17.

Name	Label
block	Block ID
barrio	Neighborhood
calle	Street
altura	Street numbering
sameblock	Jewish institution on block
distance	Number of blocks to closest Jewish institution
public	Public building on block
