Economics 101
Fall 2014
October 7, 2014
First Midterm Afternoon Lecture

ANNOTEATED KEY

Version 1
READ THESE INSTRUCTIONS CAREFULLY.
DO NOT BEGIN WORKING UNTIL THE PROCTOR TELLS YOU TO DO SO

You have 75 minutes to complete this exam. The exam consists of 14 binary response questions worth 2 points each and 20 multiple choice questions worth 3.5 points each for a total of 98 points. You will receive two points if you accurately and completely provide your name, ID number, discussion section number, version number, and TA name on the scantron sheet AND this exam booklet. Thus, the total number of points on the exam is 100. Answer all questions on the scantron sheet with a #2 pencil. There are 20 printed pages in this exam, including this cover sheet.

WARNING: NO COMMUNICATION OR CALCULATING DEVICES, OR FORMULA SHEETS ARE ALLOWED. NO CONSULTATION AND CONVERSATION WITH OTHERS ARE ALLOWED WHILE YOU ARE TAKING EXAM OR IN THE EXAM ROOM. PLAGIARISM IS A SERIOUS ACADEMIC MISCONDUCT AND PUNISHABLE TO THE FULLEST EXTENT.

PICK ONLY ONE BEST ANSWER FOR EACH QUESTION.

How to fill in the scantron sheet and other information:
1. Print your last name, first name, and middle initial in the spaces marked "Last Name," "First Name," and "MI." Fill in the corresponding bubbles below.
2. Print your student ID number in the space marked "Identification Number." Fill in the bubbles.
3. Write the number of the discussion section you’ve been attending under "Special Codes" spaces ABC, and fill in the bubbles. You can find the discussion numbers below on this page.
4. Write the version number of your exam booklet under "Special Codes" space D, and fill in the bubble. The version number is on top of the page.

- If you believe there is an error on the exam or you do not understand something, make a note on your exam booklet and the issue will be addressed AFTER the examination is complete. No questions regarding the exam can be addressed while the exam is being administered.
- When you are finished, please get up quietly and bring your scantron sheet and this exam booklet to the place indicated by the proctors.

**BINARY CHOICE QUESTIONS (14 QUESTIONS WORTH 2 POINTS EACH)**

1. A new technology called fracking makes it easier to get natural gas out of the ground. This natural gas can then be used to heat homes and generate electricity. Given this information and holding everything else constant, in the market for natural gas this will result in
   - a. An increase in the supply of natural gas. 
   - b. An increase in the demand for natural gas. 

2. Suppose that new fracking technology has led to a lower equilibrium price for natural gas. The result of the lower price is
   - a. An increase in demand. 
   - b. An increase in the quantity demanded. 

(see above)
The next **TWO (2)** questions use the following PPF:

3. The United States can produce Fireworks or Satellites according to the above PPF. The opportunity cost of producing more Satellites is higher at
   - a. Point A.
   - b. Point B.

4. Fireworks are consumed for entertainment, while Satellites are capital, or investment goods. Holding everything else equal, which production point will expand the PPF more in future years?
   - a. Point A
   - b. Point B

5. The government imposes a price ceiling on the price of milk. Suppose this price ceiling is effective in the market for milk and results in an excess demand of 9 units of milk. If the demand for milk is given by the equation \( P = 30 - 2Q \), and the supply of milk is given by the equation \( P = Q \), then the price ceiling must be equal to
   - a. $4.
   - b. $16.
6. Yoshi is taking the first 75-minute midterm exam for Econ 101. The exam consists of 15 binary choice questions and 20 multiple choice questions. Suppose Yoshi knows that if he only answers binary choice questions he can finish 35 binary choice questions in 75 minutes; and Yoshi also knows that if he only answers multiple choice questions he can finish 25 multiple choice questions in 75 minutes. Assume that Yoshi's PPF for these two goods is linear. What is Yoshi's opportunity cost of solving one binary choice question?

(a) 4/3 multiple choice questions.
(b) 5/7 multiple choice questions.

7. Suppose Praxiteles and Antipater each can produce two goods: marble statues and lyric poems. The table below describes their production possibilities if they only carve statues or only write poems. Assume constant opportunity costs.

<table>
<thead>
<tr>
<th></th>
<th>Statues</th>
<th>Poems</th>
</tr>
</thead>
<tbody>
<tr>
<td>Praxiteles</td>
<td>6</td>
<td>3</td>
</tr>
<tr>
<td>Antipater</td>
<td>2</td>
<td>6</td>
</tr>
</tbody>
</table>

If Praxiteles and Antipater specialize in their respective comparative advantages, what will be the trading range for the price of one statue?

(a) between 1/3 of a poem and 2 poems
(b) between 1/2 of a poem and 3 poems

8. True or False? If an individual has comparative advantage in the production of a good, then she necessarily has absolute advantage in the production of that good.

(a) True
(b) False

9. Madison has recently seen the demand for candy increase. New candy stores on State Street have also opened, increasing the supply of candy. Given these changes, which of the following statements must be true?

(a) The quantity of candy sold has increased. True
(b) The price of candy has increased. False
10. Water is an absolute necessity for survival. Yet we see that the price of water is lower than the price of diamonds. An economic explanation of this price difference is that

a. Diamonds are a luxury, so people should pay more for diamonds.

b. The available supply of water is much larger than the available supply of diamonds.

11. Consider a market with a downward sloping demand curve and an upward sloping supply curve, which intersect one another at some point in the first quadrant. Excess demand in this market always implies prices above equilibrium and excess supply in this market always implies prices below equilibrium.

a. True

b. False

12. Josie loves nachos and apples. She notices that when her income falls her consumption of nachos increases and her consumption of apples decreases. From this information and holding everything else constant, which of the following statements is correct?

a. Apples are an inferior good and nachos are a normal good for Josie.

b. Apples are a normal good and nachos are an inferior good for Josie.

13. A farmer comes to the Madison farmers’ market to sell green beans. He normally charges $2/pound of green beans. But today it is raining heavily, and there are not nearly as many customers as normal. What can we predict about the equilibrium price of green beans at the farmers’ market today?

a. The equilibrium price today should be less than $2/pound.

b. The equilibrium price today should be more than $2/pound.

14. Every month, the Bureau of Labor Statistics reports new updated data on the unemployment rate. We would classify this as

a. Cross-sectional data.

b. Time-series data.
MULTIPLE CHOICE QUESTIONS (20 QUESTIONS WORTH 3.5 POINTS EACH)

15. Suppose initially Moshi’s opportunity cost of grading one Econ101 homework equals solving 1/10th of an Econ 711 problem. But, then he decides to grade more carefully, so that his opportunity cost of grading one Econ 101 homework now equals solving 1/5th of an Econ 711 problem. His opportunity cost of solving one Econ 711 problem

a. Increases by 1/5 Econ101 homeworks.
b. Decreases by 1/5 Econ101 homeworks.
c. Decreases by 5 Econ101 homeworks.
d. Increases by 5 Econ101 homeworks.

Use the following graph to answer the next THIRTEEN (3) questions. The graph depicts the sugar market where P is the price per pound of sugar and Q is the quantity of sugar in pounds.

16. Suppose that initially the sugar market is in equilibrium and the government decides to impose a minimum price (a price support) of P = $3 per pound of sugar in the sugar market. The change in consumer surplus induced by this policy can be measured as the

a. Decrease of (Area A + Area B + Area F + Area G)
b. Increase of (Area C + Area H)
c. Decrease of (Area A + Area B)
d. Decrease of (Area B + Area C)
17. To implement this minimum price, the government itself must

- Sell sugar to consumers. ✗
- Buy sugar from producers. ✓
- Begin growing its own sugar cane in order to produce more sugar. ✗
- Ban the sale of candy. ✗

18. When the government implements the price support, producers’ revenues

- Increase by $50 relative to their initial revenue before the implementation of the price support. ✓
- Increase by $150 relative to their initial revenue before the implementation of the price support. ✗
- Increase by $250 relative to their initial revenue before the implementation of the price support. ✗
- Increase by $450 relative to their initial revenue before the implementation of the price support.

\[
\text{Producer revenue without price support} = P_c \cdot Q_c = ($2/unit)(100\text{units}) = $200
\]

\[
\text{Producer revenue with price support} = P_s \cdot Q_s = ($3/unit)(150\text{units}) = $450
\]

19. Clay Mathews, a star football player, is known for his long hair. All his fans in Wisconsin decide they want to look like Clay, and stop getting haircuts. Given this information and holding everything else constant, in the market for haircuts in Wisconsin, this causes

- A decrease in the supply of haircuts, and a decrease in the quantity of haircuts demanded. ✗
- An increase in the quantity of haircuts supplied. ✗
- An increase in the price of haircuts. ✗
- A decrease in the demand for haircuts, and a decrease in the quantity of haircuts supplied.
Use the following information to answer the next **FOUR (4)** questions:

Consider the market for the long-awaited iPhone 6 Plus, which was released in September. Suppose the supply curve for this phone is given by the following equation where \( Q^S \) is the quantity of phones supplied and \( P \) is the price per phone:

\[ Q^S = 2P \Rightarrow P = \frac{1}{2} Q^S \]

You are also told that the market demand for the iPhone 6 Plus is given by the following set of equations where \( Q^D \) is the quantity of iPhone 6 Pluses demanded and \( P \) is the price per iPhone 6 Plus:

\[ Q^D = 2000 - 2P \text{ for } 0 \leq P \leq 1000, \]
\[ Q^D = 0 \text{ for } P \geq 1000 \]

20. Given this information and holding everything else constant, what is the market equilibrium price and quantity for the iPhone 6 Plus?

   a. $300 per iPhone 6 Plus and 600 iPhone 6 Pluses
   b. $500 per iPhone 6 Plus and 1000 iPhone 6 Pluses
   c. $500 per iPhone 6 Plus and 500 iPhone 6 Pluses
   d. $300 per iPhone 6 Plus and 1400 iPhone 6 Pluses

Suppose that a new group of consumers, a group of older people, now demand the iPhone 6 Plus as well because of its bigger screen. The demand for this new group of consumers is given by the following information where \( Q^D_o \) is the quantity of iPhone 6 Pluses demanded by these older consumers and \( P \) is the price per iPhone 6 Plus:

\[ Q^D_o = 1500 - P \text{ for } 0 \leq P \leq 1500, \]
\[ Q^D_o = 0 \text{ for } P \geq 1500 \]

21. Given the above information and holding everything else constant, what is the aggregated market demand (this includes all the potential consumers that have been described) for the iPhone 6 Plus? In the answers below \( Q^D_T \) refers to the total quantity demanded of iPhone 6 Pluses.

   a. \( Q^D_T = 2000 - 2P \text{ for } P \geq 0 \)
   b. \( Q^D_T = 3500 - 3P \text{ for } 0 \leq P \leq 1000, \]
   \[ Q^D_T = 5000/3 - (2/3)P \text{ for } 1000 \leq P \leq 1500 \]
   \[ Q^D_T = 0 \text{ for } P \geq 1500 \]
   c. \( Q^D_T = 3500 - 3P \text{ for } 0 \leq P \leq 1000, \]
   \[ Q^D_T = 1500 - P \text{ for } 1000 \leq P \leq 1500, \]
   \[ Q^D_T = 0 \text{ for } P \geq 1500 \]
   d. \( Q^D_T = 2000 - 2P \text{ for } 0 \leq P \leq 1000, \]
   \[ Q^D_T = 1500 - P \text{ for } 1000 \leq P \leq 1500, \]
   \[ Q^D_T = 0 \text{ for } P \geq 1500 \]
22. Given the above information and holding everything else constant, how would the market equilibrium quantity for the iPhone 6 Plus change after older people join the market?

- a. The market equilibrium quantity would increase. ✓
- b. The market equilibrium quantity would decrease. ✗
- c. There would be no change in the equilibrium quantity due to these changes. ✗
- d. There is not enough information provided to answer this question with certainty. ✗

23. What is the market equilibrium price after older people join the market for the iPhone 6 Plus?

- a. $500 ✗
- b. $450 ✗
- c. $300 ✗
- d. $700

\[ \text{Implied } P_e = 500 \]
\[ P_2 > 500 \]

\[ \text{But } D_e = 3500 - 3P \]
\[ D_e = 2P \]
\[ 3500 - 3P = 2P \]
\[ 3500 = 5P \]
\[ P = 700 \]

24. When Moshi moved to Madison, Gary helped him by allowing Moshi to stay in his apartment for 2 days. Moshi thought prior to moving to Madison that he would eat lunch (a normal good) every day at the Memorial Union. However when Moshi got here he realized that Gary’s house was a long way from campus and that it would cost him $2 per bus (Moshi got here before the day bus passes were available to students) for each trip to the University and back to Gary’s house. Given this unexpected transportation expense, and holding everything else constant, what impact would you predict this had on Moshi’s demand curve for lunch at Memorial Union? Moshi’s demand curve

- a. Should shift to the left. ✓
- b. Should shift to the right. ✗
- c. Should not be affected at all by this situation. ✗
- d. May shift to the right or to the left. ✗

Moshi consumes bus tickets and lunch together.
Use the following information to answer the next **TWO (2)** questions:

Suppose India and Japan produce only two goods, movies and comic books. Both countries have the same amount of resources. The table below shows how many movies and comic books each country can produce if they use all their resources on a single good. Assume that both countries have linear production possibility frontiers. The countries can trade with each other.

<table>
<thead>
<tr>
<th></th>
<th>Movies (max)</th>
<th>Comic books (max)</th>
</tr>
</thead>
<tbody>
<tr>
<td>India</td>
<td>1600</td>
<td>480,000</td>
</tr>
<tr>
<td>Japan</td>
<td>1000</td>
<td>400,000</td>
</tr>
</tbody>
</table>

25. Which of the following statements is true?

- **a.** India has the absolute advantage in the production of both movies and comic books. ✓
- **b.** India has the absolute advantage in the production of movies. Japan has the absolute advantage in the production of comic books. ✗
- **c.** Japan has the absolute advantage in the production of movies. India has the absolute advantage in the production of comic books. ✗
- **d.** Japan has the absolute advantage in the production of both movies and comic books. ✗

26. Suppose India and Japan trade with each other and each country specializes in producing one good. Which country will specialize in the production of each good?

- **a.** Both India and Japan will specialize in producing comic books. ✗
- **b.** India will specialize in the production of movies. Japan will specialize in the production of comic books. ✓
- **c.** Japan will specialize in the production of movies. India will specialize in the production of comic books. ✗
- **d.** There are no gains to either Japan or India from specialization. ✗
27. Consider Paul who owns the Pecan Valley farm in Hollandale, Wisconsin. He plants sweet corn and raises chickens for eggs. Carefully examine the Production Possibility Frontiers (PPFs) shown below. Which of these PPF are equivalent to one another?

a. PPF #1 and #3
b. PPF #2 and #4
c. PPF #1, #2, and #3
d. PPF #1, #2, #3, and #4
Use the following information for the next THREE (3) questions:

Suppose Wilhelm and Ludwig each can produce two goods: fairy tales and etchings. Assume that both Wilhelm and Ludwig have linear production possibility frontiers and that they each have the same resources. The table below describes two possible production points for each of these individuals.

<table>
<thead>
<tr>
<th>Possible Production Points for Wilhelm (Etchings, Fairy Tales)</th>
<th>Possible Production Points for Ludwig (Etchings, Fairy Tales)</th>
</tr>
</thead>
<tbody>
<tr>
<td>(2.5, 5)</td>
<td>(1, (\frac{3}{4}))</td>
</tr>
<tr>
<td>(3, 4)</td>
<td>(3, (\frac{3}{4}))</td>
</tr>
</tbody>
</table>

28. Given the above information, which of the following statements is true?
   a. Wilhelm has the comparative advantage in the production of fairy tales and etchings.
   b. Wilhelm has the comparative advantage in the production of fairy tales; Ludwig has the comparative advantage in the production of etchings.
   c. Wilhelm has the absolute advantage in the production of fairy tales; Ludwig has the absolute advantage in the production of etchings.
   d. Wilhelm has the comparative advantage in the production of etchings; Ludwig has the comparative advantage in the production of fairy tales.

29. Which equation (or set of equations) expresses the joint production possibility frontier for Ludwig and Wilhelm? (Let \(F\) be the number of fairy tales and \(E\) be the number of etchings.)
   a. \(F = 11 - (9/4)E\)
   b. \(F = 11 - (1/4)E\) for \(0 \leq E \leq 4\)
      \(F = 46 - 9E\) for \(4 \leq E \leq 5\)
      \(F = (9/4) - (1/4)E\) for \(5 \leq E \leq 9\)
   c. \(F = 11 - (1/4)E\) for \(0 \leq E \leq 4\)
      \(F = 18 - 2E\) for \(4 \leq E \leq 9\)
   d. \(F = 11 - 2E\) for \(0 \leq E \leq 5\)
      \(F = (9/4) - (1/4)E\) for \(5 \leq E \leq 9\)

30. Given your analysis and the above information, which of the following statements is a normative statement?
   a. Wilhelm should only write fairy tales and Ludwig should only cut etchings.
   b. Ludwig has the absolute advantage in the production of etchings.
   c. Ludwig can produce etchings more cheaply than Wilhelm can.
   d. Wilhelm has the comparative advantage in the production of etchings.
31. Suppose Bob produces sandals (S) and brooms (B) according to the following PPF:

\[ S = 10 - 2B \]

Is the production of 4 sandals and 2 brooms feasible for Bob, and if so, does it make efficient use of Bob's resources? This production point is

- Feasible, but not efficient for Bob.
- Feasible and efficient for Bob.
- Not feasible and not efficient for Bob.
- Not feasible, but efficient for Bob.

\[ \Rightarrow (3, 5) = (2, 4) \]

Feasible But Not Efficient

Use the following information for the next THREE (3) questions:

The market for wheat can be described by the following demand and supply curves, where P is the price per bushel of wheat and Q is the quantity of bushels of wheat.

Market Demand: \[ P = 9 - Q_d \]
Market Supply: \[ P = 3 + 2Q_s \]

32. Suppose the government sets a price floor in the market for wheat; i.e., the government implements a policy that says the price of wheat cannot be lower than $8 per bushel. Given this price support and holding everything else constant, find the quantities of wheat that will be demanded and supplied at this new price of $8 per bushel.

- Quantity demanded = 2 bushels of wheat, Quantity supplied = 4 bushels of wheat
- Quantity demanded = 1 bushel of wheat, Quantity supplied = 3 bushels of wheat
- Quantity demanded = 1 bushel of wheat, Quantity supplied = 2.5 bushels of wheat
- Quantity demanded = 3 bushels of wheat, Quantity supplied = 1 bushel of wheat

33. As a result of the imposition of the price floor described in the previous question, the government decides to purchase the excess supply. Calculate the total cost of the price support program to the government. Assume that there are no storage costs associated with the government purchasing the excess supply. The total cost of the price support program to the government is

- $8
- $10
- $11
- $12

\[ \text{Cost to get} = \left( \frac{$8/\text{unit}}{\text{unit}} \right) (2.5 \text{units} - 1 \text{unit}) \]
\[ \text{Cost to get} = \$12 \]
34. Suppose the government wants suppliers of wheat to earn $8 for each bushel of wheat sold. However, the government decides to offer a subsidy for each bushel sold rather than implementing a price support program. Given the above information and holding everything else constant, how much subsidy does the government have to offer for each bushel of wheat in order for wheat suppliers to earn $8 per bushel of wheat sold?

a. $1.00 per bushel of wheat  
b. $1.50 per bushel of wheat  
c. $2.00 per bushel of wheat  
d. $2.50 per bushel of wheat
(This page is intentionally left blank as an extra work sheet.)
