

The Financial System
(provisional, subject to revision, rev 8/28)

1. INTRODUCTION

This course will review the basics of monetary policy, including how the money supply is controlled and the role of the banking system. The course will then cover the principles of asset pricing, the role of collateral constraints and other informational problems in banking, and how those factors induce feedback loops in the macroeconomy. A portion of the course will address the analysis and implications of financial regulation or non-regulation, especially in regard to the financial crisis of 2008. Prerequisites: Econ 301/311 and 302/312, Econ 310. If you have completed Econ 410 with a prior statistics course other than 310, you can enroll with my authorization.

4. GRADING

Letter grading is determined as follows:

10%	Problem sets (×3)
50%	Midterm (×2)
40%	Term paper

Late assignments will not be accepted for credit. Although the problem sets do not constitute a large portion of the grade, I strongly encourage you to do the assignments in a timely and serious fashion. The problem sets provide valuable information regarding your grasp of the concepts.

5. THE TERM PAPER

A 15 page term paper will be due at the end of the semester. You will have latitude in terms of the choice of topic. However, I will be able to give you more guidance on certain topics than others. Additional details regarding this assignment, along with suggested readings, will be provided later in the term.
